1. On a global humanitarian scale: to stop human rights abuses in North Korea

Abominable human rights abuses occur on a daily basis in North Korea. The North Korean human rights situation has been recognized as “one of the worst in the world” by the United Nations. Amnesty International has also labeled North Korea as the “worst place to live”.

i. Public Executions and Torture

North Koreans are not entitled to any basic rights under the government. They are denied freedom of speech, press, religion and movement. Crimes in North Korea are punishable by death or torture that is “worse than the way animals are slaughtered”.

- Two North Koreans publicly executed for reading South Korean propaganda
- Public Execution (YouTube Video)
ii. Starvation and Food Shortage

In addition to the denial of freedom and basic liberties, North Korean citizens are subject to malnutrition and starvation because of an unequal distribution of food. According to the World Food Programme (WFP) in 2008, almost 30 percent of the population (6.5 million people) did not have enough food to eat.6

- North Koreans live in dire poverty and are malnourished because the government does not provide food or medical care.
- Poverty in North Korea (YouTube Video)

iii. Prison and Work Camps

North Koreans are sent to prison camps as political prisoners if they are seen to be “criticizing” the regime. In these prison camps, North Koreans are treated like slaves and subject to torture and hard labor. There are approximately 200,000 inmates currently in these prison camps.7

- “Hell Holes”: North Korea’s Secret Prison Camps by Amnesty International (YouTube Video)
- Story of Shin DongHyuk, the only known survivor of a ‘total-control zone” prison camp

iv. North Korean Refugees in China

Many North Koreans flee to China in order to escape the repressive North Korean lifestyle, only to find that life in China is not much better. North Korean refugees in China are placed in a “legal limbo” where they are not recognized as citizens and, as a result, cannot receive education or medical care.8 Women are often sold as sex slaves to Chinese men and children are left parentless. The refugees in China live in constant hiding and fear being sent back.

- Congressional Research Service’s Report on North Korean Refugees in China
- “North Korean Defectors Give Grim Testimony of Experiences with China” by Gary Feuerberg in The Epoch Times: North Korean women tell their stories of human trafficking and forced marriage

A unified Korean peninsula under a democratic government would enable the oppressed North Koreans to be free from the Kim Jong-Il dictatorship and human rights violations

2. On an international scale: to establish greater peace and stability

Tensions between the great powers remain high in East Asia as they seek ways to minimize confrontations between the two Koreas and keep the North’s military provocations at bay. A unified Korea would promote greater peace and reduce the risks of increased nuclear weapons, proliferation and war.

i. Ease Tensions between Big Powers in East Asia

A secure and unified Korean peninsula can ease tensions that have been prevalent throughout history between the “big powers” – including Russia, China, Japan and the United States. If Korea is unified and more stable, it will no longer be an “object of contention” that other countries take advantage of. Currently, China is North Korea’s biggest supporter – both economically and politically. If North Korea were to fall into China’s hands, tensions between regional powers, namely China and the U.S., would increase and potentially lead to military confrontation.

A unified Korea will also restore stability and peace in the region as North Korea’s unpredictable military acts come to an end.

ii. Reduction of Nuclear Weapons and Missile Threat

Kim Jong-Il uses North Korea’s nuclear weapons as his trump card in order to receive foreign concessions. The threat of North Korea’s nuclear weapons program has increased anxiety and tension between countries. Additionally, North Korea exports weapons to rogue states, including Libya and Iran, which could lead to arms proliferation and the possession of missiles in dangerous hands.9

- North Korea may have developed a ballistic missile capable of carrying a nuclear warhead

Under a unified Korea, the threat of nuclear weapons and arms proliferation would be greatly reduced and promote greater peace in the region.

---

3. On a domestic scale: to strengthen Korea as a single nation

"United we stand, divided we fall.”  
-Aesop

i. Access to Natural Resources

North Korea has underground mineral resources that are valuable to the world.

- North Korea has the world’s largest source of magnesite (magnesium carbonate) – which is used for building light-weight automobile parts – at 4 to 5 million tons. The South Korean Ministry of Unification estimates that these resources are worth $4.5 trillion.\(^\text{10}\)
- As of now, China has more access to North Korea’s natural resources than South Korea does.\(^\text{11,12}\)
- Korea could receive gas resources from Russia via pipelines through the north, which are much cheaper than shipping oil and gas.\(^\text{13}\)

\[^{\text{13}}\] Byun Duk-kun. “Seoul’s new envoy to Russia vows to speed up gas pipeline project”. Yonhap News Agency. 10 February 2010. [http://english.yonhapnews.co.kr/northkorea/2010/02/10/18/0401000000AEN201002100086000015F.HTML](http://english.yonhapnews.co.kr/northkorea/2010/02/10/18/0401000000AEN201002100086000015F.HTML)

ii. Geographical Advantage

A reunified Korea could take greater advantage of its central geographical position as an intermediary base for trade, similar to that of Singapore. It could act as an entry point for China to the Pacific and a connecting point between Japan and the mainland (Asia), which would increase Korea’s role in international trade and relations.

- In particular, access to seaports in the North (near the border between China and Russia) provide important points for transporting goods more efficiently.

iii. Reduction of Military Expenditures

Even now, North and South Korea are still at war and peace has only been maintained because of a cease-fire armistice signed in 1953. In addition to this war mindset, recent provocations from the North (Cheonan, YeongPyong Island) continue to prompt South Korea to spend large amounts of money on military expenditures for its defense.

- In 2010 South Korea’s defense budget was estimated to be $27.6 billion (2.9% of its GDP). It was...
The 15 countries with the highest military expenditure in 2010

Spending figures are in US$, at current prices and exchange rates. Countries are ranked according to military spending at Market Exchange Rates (MER). Figures for military spending at Purchasing Power Parity (PPP) exchange rates are also given for information.

[] = estimated figure; GDP = gross domestic product.

a The figures for national military expenditure as a share of GDP are for 2010, and are based on estimates for 2010 GDP from the IMF World Economic Outlook, October 2010.

b The figures for military expenditure at PPP exchange rates are estimates based on the ratio of PPP to MER-based GDP projections for 2010 from the IMF World Economic Outlook, October 2010. Thus, military expenditure figures at MER rates have been multiplied by the same ratio to obtain the PPP estimates.

c The figures for Saudi Arabia include expenditure for public order and safety and might be slight overestimates.

- In 2010, South Korea was the third largest importer of weapons in the world.14

Reunification would put an official end to the war between the two countries and reduce the financial burden of military expenditures spent on maintaining the current armistice.

iv. Improvements to Korea’s Financial Standing and Domestic Markets

Currently, the risk of war and regional instability has brought upon high interest rates for the South Korean government. A unified Korea, with no risk of war, would increase and encourage foreign investment. Korea can improve its international credit standing for bond issuance and other financial investments from abroad. Additionally, the population of South Korea is estimated to be 48,754,657 but its domestic market is considered small and easily influenced by fluctuations in foreign markets. As of now, exporting industries represent the South Korean domestic market. Thus, small and medium enterprises have business structures that are dependent on larger, exporting enterprises.\(^{15}\) \(^{16}\) \(^{17}\)

- In order for a nation to be self-sufficient by its domestic market, its economic scale must be supported by a population of 100,000,000. Reunification would increase the Korean population and create a larger pool of cheap labor that encourages domestic market expansion and foreign investment.\(^{18}\)

v. Transportation and Traveling Convenience

At present, traveling and transporting goods from South Korea can be difficult due to its geographical position and the inability to move through the North. A reunified peninsula would allow people free movement to other countries that are connected to Korea. With an extensive transportation system that runs from the South to the North (like a railway), goods could be transported easily, which would lower shipping costs for businesses. This would open up opportunities for new businesses and create new job openings and more business relations between Korea and other countries.

Traveling would also become more convenient for people in Korea because there would be more options for travel. In particular, railroad transit could be a cheaper means of transportation compared to plane and could even potentially reduce CO\(_2\) gas\(^{19}\) emissions in the long-
vi. German Reunification Model

The German reunification may serve as a model or guide for Korea’s own reunification. After the reunification of East and West Germany, Germany has been able to rise into playing a central role in the EU with the leading economy\(^2\). Despite initial financial burdens, reunification will produce greater long-term benefits for Korea as a country. A unified Korea can use the strength of its population to reach economic success.
